## **INCREASING PRODUCTION, NOT COST**

QuietCut® Pro is a revolutionary design in cutting tools for surfacing applications. The QuietCut® Pro offers major advantages over the typical straight or staggered knife tools on the market today.

QuietCut® Pro's revolutionary design combines a true helical orientation of the inserts, along with the insert mounted on a shear angle. This technology enables the sheared inserts to stay in contact with the surface of the wood with each revolution.

The QuietCut® Pro's design reduces spindle and machine vibration, and progresses the cut across the wood surface for a smooth finish and an extremely long tool life.

The QuietCut® Pro lives up to its name—it can reduce sound levels by 20dB per spindle!
